SUMMARY

Aspiring Product Manager pursuing structured PM training through NextLeap, with hands-on experience in user research, product discovery, MVP planning, wireframing, prototyping, and AI-assisted product workflows. Passionate about solving user problems through structured product thinking, experimentation, and intuitive digital experiences.

EDUCATION

Lovely Professional University

Master of Computer Applications

Expected August 2026

Phagwara, India

University of Allahabad

Bachelor of Computer Applications

Graduated June 2023

Prayagraj, UP

EXPERIENCE

Cognizant

Process Executive, gTech Ads

July 2024 – August 2025

Gurgaon, Haryana

- Supported campaign and operational improvement initiatives for global clients within the gTech Ads team.
- Collaborated across teams to improve workflow efficiency, operational quality, and process performance.
- Supported process optimization initiatives and contributed to operational decision-making through analytical problem solving.
- Awarded **“Star Performer of the Team”** twice for exceeding performance expectations and delivering high-impact results.

PRODUCT MANAGEMENT PROJECTS

FinSage [🔗](#) | AI-Powered Portfolio Intelligence Platform

2026

- Built a full-stack, zero-cost AI portfolio platform tracking Indian stocks & cryptos in a single view.
- Owned the product lifecycle by conducting user research, defining the product scope and North Star Metric, drafting the PRD, and managing the technical implementation of V1.
- Designed a cost-controlled AI pipeline using a two-stage news agent that filtered 95% of irrelevant news via code-level ticker matching before invoking LLMs, keeping operating costs at \$0/month.
- Developed a context-aware RAG chatbot (Llama-3.3-70B via Groq) for holding-aware portfolio analysis and an automated Gmail MCP email agent for daily portfolio digests.
- Iterated through a private beta with 4–5 users, resolving token truncation issues and refining digest vs. alert severity thresholds based on user feedback.

- Identified that customer feedback at Groww was scattered across thousands of daily Play Store reviews, causing missed release-critical bugs and manual, hours-long spreadsheet logging.
- Designed and built an automated weekly pipeline that scrapes and filters reviews, then uses embeddings and unsupervised clustering (UMAP + HDBSCAN) to surface recurring complaint themes without a fixed taxonomy.
- Built an LLM summarization layer with a strict quote-validation step to eliminate hallucinated user quotes, and delivered themes directly into stakeholder Google Docs and Gmail drafts via MCP.
- Shipped a dashboard SPA for product teams to review themes and trigger runs, eliminating 100% of manual review logging and cutting bug-identification time from days to hours.

ChatGPT Voice Adoption Research | User Research

2026

- Conducted user segmentation and research to understand why Indian users were not actively using ChatGPT voice input.
- Designed surveys, ran qualitative interviews, framed hypotheses around regional language accessibility, and synthesized insights using problem-framing frameworks.

Peppo Growth & Segmentation Case Study | Growth Strategy

2026

- Analyzed retention and growth challenges for a food-tech startup by identifying high-value customer segments, unmet user needs, and low-intent acquisition channels.
- Proposed prioritization strategies, retention experiments, and growth initiatives to improve repeat usage and engagement.

Smart Society | AI-Assisted MVP

2026

- Designed an AI-assisted society management MVP focused on resident and security workflows.
- Built wireframes and prototype flows using Stitch AI, designed application screens in Figma, and defined MVP features, user flows, and workflow journeys for residents, visitors, and security guards.

SKILLS

Product Skills: User Research, Product Discovery, Segmentation, MVP Planning, Wireframing, Prototyping, Product Strategy, Problem Framing, Prioritization & Roadmapping, PRD Writing

Tools: Jira, Notion, Figma, Stitch AI, ChatGPT, Claude

AI-Assisted Building: Full-stack prototyping (Next.js, Firebase), LLM/API integration, agentic workflow design
